Sequence 2, Application US/09061768A

Patent No. 6204037

GENERAL INFORMATION:

APPLICANT: BRASH, ALAN R.

APPLICANT: BRASH, MITSUO

TITLE OF INVENTION: LIFOXYGENASE PROTEINS AND NUCLEIC ACIDS

NUMBER OF SEQUENCES: 36

CORRESPONDENCE ADDRESS:

ADDRESSEE: ADTRESS:

ADDRESSEE: ADTRESS:

CONTRES: SUITE 1400, UNIVERSITY TOWER, 3100 TOWER BOULEVARD

STREET: SUITE 1400, UNIVERSITY TOWER, 3100 TOWER BOULEVARD

CITY: DURHAM

STREET: SILTE 1400, UNIVERSITY TOWER, 3100 TOWER BOULEVARD

COUNTRY: USA

ZIP: 27707

COMPUTER READABLE FORM:

MEDIUM TYPE: Diskette, 3.50 inch, 1.4 MB storage

COMPUTER: IBM PC/XT/AT compatible

OPERATING SYSTEM: WINDOWS 3.1

COMPUTER: WORD PERFECT 6.1 and ASCII

COMPUTER: MORD PERFECT 6.1 and ASCII

CURRENT APPLICATION DATA: US/09/061,768A

FILING DATE: APPLICATION DATA: NONE

APPLICATION NUMBER: US/09/061,768A

GENERAL INFORMATION:
APPLICANT: Riley M.D., Lee W.
APPLICANT: Chong, Pele
TITLE OF INVENTION: DNA MOLECULE FRAGMENTS ENCODING FOR
TITLE OF INVENTION: CELLULAR UPTAKE OF MYCOBACTERIUM TUBERCULOSIS AND USES
TITLE OF INVENTION: THEREOF
                                                                                                                                                                                            APPLICANT: Riley M.D., Lee W.
TITLE OF INVENTION: DNA Molecule Encoding for Cellular
TITLE OF INVENTION: Uptake of Mycobacterium Tuberculosis and Uses thereof
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSEE: Nixon, Hargrave, Devans & Doyle
STREET: Clinton Square, P.O. Box 1051
CITY: Rochester
STATE: New York
COUNTRY: 0.S.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-08-689-411-2

Sequence 2, Application US/08689411

Patent No. 6224881

GENERAL INFORMATION:

APPLICANT: Riley M.D., Lee W.

APPLICANT: Chong, Pele

TITLE OF INVENTION: CELLULAR UPTAKE OF MYCOBACTERIUM TUBERCULOSIS AND USES

TITLE OF INVENTION: THERROF

TITLE OF INVENTION: THERROF

CORRESPONDENCES: 14

RESULT 19
State (EC 1.11.1.6) 1 - maize
Catalase (EC 1.11.1.6) 1 - maize
Catalase (EC 1.11.1.6) 1 - maize
C; Species: Zea mays (maize)
C; Date: 14-u1-1995 #sequence_revision 10-Nov-1995 #text_change 04-Mar-2000
R; Guan, L.; Scandalios, J.G.
Phant J. 3, 527-536, 1993
A; Title: Characterization of the catalase antioxidant defense gene Catl of maize, and A; Reference number: S48124, MUID:94035156
A; Molecule type: DNA
A; Residues: 1-492 <GUA>
A; Cross-references: EMBL: X60135; NID:9311238; PIDN:CAA42720.1; PID:9311239
A; Title: Characterization of catalase transcripts and their differential expression i A; Reference number: JA0090; MUID:89051000
A; Molecule type: mRNA
A; Residues: 1-156, 'A, '158-210, 'S, '212-328, 'S', 330-482,'P', 484-492 <RED>
A; Cross-references: GB:X12538; GB:M33104; NID:922231; PIDN:CAA31056.1; PID:922232
A; Cross-references: GB:X12538; GB:M33104; NID:922231; PIDN:CAA304010405
A; Dromoprotein; heme: iron; metalloprotein; oxidoreductase
C; Keywords: chromoprotein; heme: iron; metalloprotein; oxidoreductase

S65793
catalase (EC 1.11.1.6) - guinea pig (fragment)
C;Species: Cavia porcellus (guinea pig)
C;Date: 28-Oct-1996 #sequence_revision 13-Mar-1997 #text_change 06-Jun-1997
C;Date: 28-Oct-1996 #sequence_revision 13-Mar-1997 #text_change 06-Jun-1997
C;Accession: S65793

Biochim. Biophys. Acta 1305, 163-171, 1996
A;Title: Differential patterns of antioxidant enzyme mRNA expression in guinea pig lu A;Reference number: S65793; MUID:96180320
A;Accession: S65793
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-121 <YUA>
A;Cross-references: EMML:U39841
C;Superfamily: catalase
C;Keywords: chromoprotein; heme; iron; oxidoreductase
                                                                                   A.Gene: GDB:CAT
A.Cross-references: GDB:119049; OMIM:115500
A.Gene: GDB:CAT
A.Cross-references: GDB:119049; OMIM:115500
A.Map position: 11p13-11p13
A.Introns: 22/3; 80/1; 117/1; 160/3; 195/3; 237/3; 301/3; 352/3; 399/1; 442/3; 478/3;
C.Complex: homotetramer
C.Superlex: homotetramer
A.Description: catalyzes the conversion of two of molecules of hydrogen peroxide to t
C.Superfamily: catalase
C.Keywords: blocked amino end; chromoprotein; heme; homotetramer; iron; metalloprotein
F; 2-513/Product: catalase #status experimental -kMAT>
F; 2-513/Product: catalase, peroxisomal form #status predicted <AMAT2>
F; 217-519/Region: peroxisome/glyoxysome location signal (5-[RKH]-L) motif
F; 2-514/A.L48/Active site: His, Ser. Asn #status predicted
F; 358/Binding site: heme iron (Tyr) (axial ligand) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of a catalase from the anaerobic bacterium
         C:Comment: Catalase occurs in almost all aerobically respiring organisms and serves C:Genetics:

A; Experimental source: flower
C; Experimental source: flower
C; Enction:
A; Gene: cat3
C; Function:
A; Description: catalyzes the conversion of two molecules of hydrogenperoxide to two mole
C; Superfamily: catalase
C; Superfamily: (axial iliquid) #status predicted
F; 55,104,138/Active site: His, Ser, Asn #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Cross_references: GB:X04076; NID:g29720; PIDN:CAA27717.1; PID:g29721

Accession: T12304.

R. Michalowski, C.B.; Quigley-Landreau, F.; Bohnert, H.J.

Submitted to the EMBL Data Library, June 1998

A. Description: Different isoforms of catalase are expressed in leaves and roots of the EMBL Data Library, June 1998

A. Reference number: 217487

A. Accession: T12304

A. Sective: preliminary; translated from GB/EMBL/DDBJ

A. Molecule type: mRNA

A. Residues: 1-493 < MIC>
A. Cross references: EMBL: AF069320; NID: g3202033; PID: g3202034

C. Superfamily: catalase

C. Keywords: heme: iron: metalloprotein; oxidoreductase

F: 55,104,138/Active site: His, Ser, Asn #status predicted

F: 549/Blnding site: heme iron (Tyr) (axial ligand) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
